PATIENT PERSPECTIVES OF AI IN HEALTHCARE

What Palliative Care Clinicians Need to Know

BREAKFAST SESSION

ZOOM WEBINAR

Thursday 5 November, 7.30 - 8.30am

ROSIE DOBSON

Associate Professor at the University of Auckland and Principal Advisor AI Research and Evaluation at Health NZ | Te Whatu Ora.

With the rapid advancement of artificial intelligence (AI) in healthcare, clinicians and health services must prioritise patient perspectives on AI use in care and the secondary use of health information in AI development and testing. Patients must be able to trust health services to use their information responsibly and integrate AI into care appropriately. Through transparency and good AI governance, trust can be built and maintained, yet if lost, it is difficult to repair and carries wider implications across healthcare.

This session presents a programme of research exploring patient perspectives on AI in healthcare, key factors impacting patient trust, and how these views are directly used to inform AI governance decisions.

Rosie is a Psychologist and a member of the National AI and Algorithm Expert Advisory Group for Te Whatu Ora, co-chair of the National AI in Health Research Network, and the AI Research Lead for the Faculty of Medical and Health Sciences at the University of Auckland.
