

PATIENT BLOOD MANAGEMENT (PBM) IN SURGICAL PATIENTS

Tuesday 17 September, 7 – 8pm

PRESENTERS:

EMMA GLEBOCKI

*Clinical Specialist Anaesthetic
Technician, Te Toka Tumai Auckland*

KATERINA HODGSON

*CNS, Patient Blood Management
team, Te Toka Tumai Auckland, RNAA
Starship Operating Rooms*

*Patient Blood Management Team at
Te Toka Tumai Auckland
from top left to bottom right -
Katia Hayes, Danielle Kim, Juvel George,
Katerina Hodgson, Emma Glebocki,
Bron Taylor, Elizabeth Dunn*

Nō Ingarangi pōrana ōku tipuna. E noho ana au ki Tāmaki Makaurau.
Ko pūkenga moemoe ahau.

Emma leverages her background in education and facilitating 2-way feedback from many disciplines, to identify flaws in systems and learning opportunities. Improving patient outcomes drives her to use evidence and feedback to co-design process improvement throughout the organisation.

Kat has an acute care background in both paediatric and adult ICU. She thoroughly enjoys and is dedicated to her roles as an RNAA and CNS for patient blood management. Kat is extremely passionate about education, research and working collaboratively with patients, whānau and staff to improve health outcomes. Recently, this passion has taken the form of a research portfolio as part of her nursing master's.

Emma and Kat work with a team focused on optimising patients' own blood and the wise use of blood products. They want to see patients and clinicians empowered to make evidence-based and equitable choices in blood management. A patient's own blood should be protected as tapu and donor blood as koha.

This session will cover:

- Applying the principles of PBM as Anaesthetic assistants
- Anaemia in surgical patients
- Explore how evidence-based strategies for avoidance of allogous blood benefits our patients.
- Management of perioperative bleeding in special circumstances.
